

HTML and CSS | Practice 2

Practice: Portfolio Page

Instructions

You will create a static HTML portfolio page that includes various HTML tags, a contact form, and a table showcasing your skills or experience. This activity will help you practice structuring content, incorporating forms, and organizing data with tables.

Tasks

Step 1: Plan the Portfolio Page

Before coding, students will plan the structure of their portfolio page. The page should include:

1. **A Header:** Contains the name and a brief tagline.
2. **An "About Me" Section:** Includes a paragraph about themselves.
3. **A Skills Table:** Displays a list of skills or tools with proficiency levels in a table format.
4. **A Contact Form:** Allows visitors to send a message, including fields for the visitor's name, email, and message.

Step 2: Create the HTML Structure

1. Use semantic tags like `<header>`, `<section>`, and `<footer>` to organize the page.
2. Create a table with appropriate headers (`<th>`), rows (`<tr>`), and cells (`<td>`).
3. Add a form with labels, input fields, and a submit button. The form should use:

- `type="text"` for the name field.
 - `type="email"` for the email field.
 - `<textarea>` for the message field.
4. Use other relevant tags, such as `<h1>`, `<p>`, `<ul>`, or `<img>`, to enhance the design.

Step 3: Test and Review

Once the page is complete, you should:

1. Test the form to ensure all fields are correctly labeled.
2. Check the table for proper alignment and formatting.
3. Review the code to ensure proper use of tags and attributes.

Example Structure

- Header
- About Me Section
- Skills Table
- Contact Form

Setup

For this activity, you will create your own repository to store your code:

1. Create a new repository.
2. Name it: practice-portfolio-page[Your First Name]-[Your Last Initial]
3. Make sure the repository is public.
4. Clone the repository to your local machine.
5. Start working on the code.

Submission

Submit the url for your GitHub repo in the field below.
