

HTML & CSS | Lesson 3

Practice: Profile Page for Portfolio

Instructions

For this practice, you'll be creating a profile page for your portfolio. You'll plan your profile page, create the HTML structure, and write an external CSS file. You'll use everything you've learned so far about HTML & CSS in order to create your page.

Tasks

Step 1: Plan Your Profile Page

Think about how you want your profile page to look and what content to include. The page should contain:

1. **A Header:** Includes your name and a brief tagline (e.g., "Aspiring Web Developer").
2. **A Section with a Profile Picture and About Me Text:** Use a placeholder image or a real one.
3. **A Skills List:** Include at least 3 skills presented in a list (ordered or unordered).
4. **A Footer:** Add any additional information, such as a copyright message or a link to your GitHub profile.

Step 2: Create the HTML Structure

In your HTML file:

1. Write semantic HTML using tags like `<header>`, `<section>`, `<ul>`/`<ol>`, and `<footer>`.
2. Ensure your content is well-organized with meaningful IDs or classes for styling.

Step 3: Write the External CSS File

Create a separate CSS file to style your HTML:

1. **Link the CSS File:** Use the `<link>` tag in the `<head>` section of your HTML file to connect the CSS.
2. **Add CSS Rules:** Style the elements in your HTML file using element selectors, class selectors, and ID selectors. Focus on:
 - Setting background colors.
 - Adjusting text alignment, colors, and fonts.
 - Adding spacing and padding to elements.

Step 4: Test and Iterate

1. Open the HTML file in your browser to see the styling applied.
2. Adjust the CSS rules as needed to achieve the desired look.

Setup

For this activity, you will work in the github repo you created for the **Practice: Portfolio Page** assignment (practice-portfolio-page[Your First Name]-[Your Last Initial]).

1. Within the repo, create two new files: one for your profile page HTML and one for your profile page CSS.
2. Start working on the code in the respective files.

Submission

Submit the url for your GitHub repo in the field below.
